

CANDIDATE ARTIFACT / BUILT FOR THE ROLE

AI CREATIVE ENGINE

FOR PERFORMANCE CREATIVE AT SCALE

A practical operating layer for turning briefs, brand context, assets, specs, and feedback into faster creative production - with human taste, QA, and approval still in control.

BRIEFS

BRAND RULES

VARIANTS

CREATIVE QA

HANDOFFS

LEARNING LOOP

Read the brief like a producer.

01

Extract audience, offer, channel, deliverables, mandatories, deadlines, risks, asset gaps, and success metric.

Load the brand before the model talks.

02

Pull approved voice, claims, examples, past winners, legal notes, platform specs, and usage rights into a reusable context layer.

Generate options, not answers.

03

Create copy routes, creator prompts, shot lists, cutdown notes, localization variants, and size/version matrices for the team to judge.

QA before handoff.

04

Check brand fit, factual risk, claims, naming, specs, missing assets, tone, and whether the work still feels crafted.

BRIEF TO ASSET SYSTEM.

Built for the work Collier.Simon describes: performance creative, brand strategy, paid social, CTV, programmatic, lifecycle / CRM creative, video content, creator workflows, and DAM libraries.

Co.Si AI Ops

- 01 BRIEF INTAKE
- 02 CONTEXT PACK
- 03 VARIANT STUDIO
- 04 QA GATE
- 05 HANDOFF DOCS
- 06 LEARNINGS

Every output remains reviewable. AI accelerates the workflow. People own the creative call.

Creative QA Gate

A human-in-the-loop checklist before anything moves to production.

- BRAND

Does the output sound and feel like the brand?
- CLAIMS

Are claims, offers, naming, and compliance risks flagged?
- SPECS

Are sizes, lengths, platform rules, and deliverables complete?
- ASSETS

Are source links, approvals, usage rights, and gaps documented?
- CRAFT

Would a producer, designer, editor, or strategist actually trust this?

Result: faster useful first drafts, cleaner reviews, and fewer production resets.

WHAT THIS PROVES

I do not just use AI. I design the workflow around it.

Collier.Simon does not need random AI output. It needs systems that protect strategy, speed up production, preserve brand quality, and create measurable creative throughput.

30-day prototype path

Interview producers, creatives, strategists, and account leads. Pick one painful repeatable workflow. Ship a lean internal prototype with clear input, output, QA, and handoff rules.

AI judgment, not AI hype

Use LLMs where they reduce friction: structuring briefs, finding context, producing variants, flagging risks, and documenting handoffs. Push back where AI lowers craft.

Built to hand off cleanly

Every system includes owners, edge cases, SOPs, reusable prompts, examples, naming rules, source links, exceptions, and a maintenance path.

Why me

At 1stStep.ai, I build AI workflows, agent pipelines, internal tools, scripts, API integrations, and documented systems that turn messy inputs into usable outputs.
